

Our commitment to the development and application of Open Source is consistent with our drive to be the land grant university of the 21st century. Through open source activities we are helping under-served populations around the world and creating new industries and new products at home.

—Ed Ray, OSU President

Open Source is all about contributions

Countless numbers of developers are all giving of their time and talents to code, document, test, design, and deliver software so that the end user may benefit from it. The Open Source Lab is here to contribute resources to the community, allowing developers to focus on what they do best.

To continue operating, we need your contributions as well. We can make good use of the following contributions:

Money. A monetary contribution to the OSL helps us to not only continue in the same level of service as we have in the past, but to expand as more resources become available. This allows us to open up hosting and resources to more open source projects. Visit osuosl.org/contribute.

Hardware. No piece of hardware goes unused here in the lab. We work with hardware vendors who want to contribute to open source software, matching their gear with the projects in most need. In many cases we can take a server and virtualize it, meaning a handful of projects can all benefit from the same box.

Time and Talents. Are you looking to jump into open source development? We have projects developed in-house that are always looking for talented developers to assist. Open source development is an excellent way to build skills and makes a great addition to your resume!

To learn more about donating, and about the OSL's immediate needs, please email support@osuosl.org.

osuosl.org

The basic idea behind Open Source is very simple: When programmers can read, redistribute, and modify the source code for a piece of software, the software evolves. People improve it, people adapt it, people fix bugs. And this can happen at a speed that, if one is used to the slow pace of conventional software development, seems astonishing.”
— Open Source Initiative - opensource.org

Located in Corvallis, Oregon, the OSU Open Source Lab welcomes visitors. Please see osuosl.org/info/location for directions to the OSL.
